

GIT AND GITHUB CHALLENGE

1.Resolve Merge Conflicts

- Create a merge conflict intentionally (two users editing the same line).
- Resolve the conflict and push the changes.

Step 1: Clone the Repository

Clone the GitHub repository to your local machine

\$ git clone [git@github.com:rajkumari-hub/Git_Challenge.git](https://github.com/rajkumari-hub/Git_Challenge.git)

```
brajk@RajKumari MINGW64 /c/ProjectRepos
$ git clone git@github.com:rajkumari-hub/Git_Challenge.git
Cloning into 'Git_Challenge'...
warning: You appear to have cloned an empty repository.

brajk@RajKumari MINGW64 /c/ProjectRepos
$ ls
Git_Challenge/

brajk@RajKumari MINGW64 /c/ProjectRepos
$ cd Git_Challenge

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ |
```

Step 2: Create the First Branch

Create a new branch named branch1.

\$ git checkout -b branch1

Create a file sample.txt by using

\$ touch sample.txt or

\$ vi sample.txt or

\$ echo "add content"> sample.txt

\$ git add .

\$ git commit -m " add sample.txt in branch1"

```
brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ git checkout -b branch1
Switched to a new branch 'branch1'

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (branch1)
$ git branch

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (branch1)
$ |
```

```
Welcome to git from branch1|
~
```

Step 3: Create the Second Branch

Switch back to the main branch.

\$ git checkout -b main

Create another branch named branch2.

\$ git checkout -b branch2

\$ git add .

\$ git commit -m "add sample.txt in branch2"

```
brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (branch1)
$ echo "Welcome to git from branch1"> sample.txt

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (branch1)
$ ls
sample.txt

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (branch1)
$ git add .
warning: in the working copy of 'sample.txt', LF will be replaced by CRLF the next time Git touches it

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (branch1)
$ git commit -m "add sample.txt in branch1"
[branch1 (root-commit) 6f26c97] add sample.txt in branch1
1 file changed, 1 insertion(+)
 create mode 100644 sample.txt

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (branch1)
$ |
```

```
Welcome to git from branch2|
~
```

```

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (branch2)
$ vi sample.txt

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (branch2)
$ ls
sample.txt

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (branch2)
$ git add .
warning: in the working copy of 'sample.txt', LF will be replaced by CRLF the next time Git touches it

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (branch2)
$ git commit -m "add sample.txt in branch2"
[branch2 e7c5952] add sample.txt in branch2
1 file changed, 1 insertion(+), 1 deletion(-)

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (branch2)
$ |

```

Step 4: Merge Branch1 into Branch2

Make sure you are on branch2.

\$ git merge branch1

```

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (branch2)
$ git merge branch1
Auto-merging sample
CONFLICT (content): Merge conflict in sample
Automatic merge failed; fix conflicts and then commit the result.

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (branch2|MERGING)
$ |

```

Step 5: Resolve the conflict

Open sample You'll see:

```

<<<<<< HEAD
Welcome to git from branch2
=====
Welcome to git from branch1
>>>>>> branch1
~
~

```

Replace it with:

```

Welcome to git from branch1 and branch2|
~
~

```

\$ git add sample

\$ git commit -m "resolved merge conflict"

```

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (branch2|MERGING)
$ ls
sample

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (branch2|MERGING)
$ vi sample

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (branch2|MERGING)
$ git add sample

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (branch2|MERGING)
$ git commit -m "resolved merge conflict"
[branch2 b2d3e08] resolved merge conflict

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (branch2)
$ |

```

Step 6: Merge into main

\$ git checkout main

\$ git merge branch2

Step 7: Push to GitHub

\$ git push -u origin main

```

1 file changed, 2 insertions(+), 1 deletion(-)

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ ls
sample

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ cat sample

Welcome to git from branch1 and branch2

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ git push -u origin main
Enumerating objects: 14, done.
Counting objects: 100% (14/14), done.
Delta compression using up to 12 threads
Compressing objects: 100% (5/5), done.
Writing objects: 100% (14/14), 1.12 KiB | 574.00 KiB/s, done.
Total 14 (delta 1), reused 0 (delta 0), pack-reused 0

To github.com:rajkumari-hub/Git_Challenge.git
 * [new branch]      main -> main
branch 'main' set up to track 'origin/main'.

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ |

```

- Verify that the sample file has been pushed to the GitHub repository.

2. Recover Deleted Branch

Delete a local branch and then recover it using the reflog.

Step 1: Open Git Bash

Navigate to your Git repository.

```
$ cd /c/ProjectRepos/Git_Challenge
```

Step 2: Create a New Branch

Create a branch named feature.

```
$ git checkout -b feature
```

```
$ git branch
```

Step 3: Create a File

Create a sample file using vi editor

```
$ vi devops
```

Step 4: Add the File

```
$ git add devops
```

Step 5: Commit the Changes

\$ git commit -m "Added future file"

```
brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ git checkout -b feature
Switched to a new branch 'feature'

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (feature)
$ vi devops

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (feature)
$ ls
devops  sample

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (feature)
$ git add devops
warning: in the working copy of 'devops', LF will be replaced by CRLF the next time Git touches it

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (feature)
$ git commit -m "added devops file"
[feature 92aa8b4] added devops file
1 file changed, 1 insertion(+)
create mode 100644 devops

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (feature)
$ |
```

Step 6: Switch Back to Main Branch

\$ git checkout main

Step 7: Delete the Local Branch

Delete the branch.

\$ git branch -d feature

Step 8: View the Reflog

Display the reflog.

\$ git reflog

```

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ git reflog
b2d3e08 (HEAD -> main, origin/main) HEAD@{0}: checkout: moving from feature to main
92aa8b4 HEAD@{1}: commit: added devops file
b2d3e08 (HEAD -> main, origin/main) HEAD@{2}: checkout: moving from main to feature
b2d3e08 (HEAD -> main, origin/main) HEAD@{3}: merge branch2: Fast-forward
6fe33ae HEAD@{4}: checkout: moving from branch2 to main
b2d3e08 (HEAD -> main, origin/main) HEAD@{5}: commit (merge): resolved merge conflict
a43c2be HEAD@{6}: commit: update sample in branch2
6fe33ae HEAD@{7}: checkout: moving from main to branch2
6fe33ae HEAD@{8}: checkout: moving from branch1 to main
f5b983c HEAD@{9}: commit: update sample in branch1
6fe33ae HEAD@{10}: checkout: moving from main to branch1
6fe33ae HEAD@{11}: commit: initial commit with sample
6f26c97 HEAD@{12}: checkout: moving from branch1 to main
6f26c97 HEAD@{13}: checkout: moving from branch2 to branch1
e7c5952 HEAD@{14}: commit: add sample.txt in branch2
6f26c97 HEAD@{15}: checkout: moving from main to branch2
6f26c97 HEAD@{16}: checkout: moving from branch1 to main
6f26c97 HEAD@{17}: commit (initial): add sample.txt in branch1
brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$

```

Step 9: Recover the Deleted Branch

Create the branch again using the commit hash.

```
$ git checkout -b feature 92aa8b4
```

Step 10: Verify the Recovery

Check the branches.

```
$ git branch
```

Step 11: Verify the Commit History

```
git log --oneline
```

Step 12: Verify the File

```
$ls
```

```

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ git checkout -b feature 92aa8b4
Switched to a new branch 'feature'

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (feature)
$ git branch
* feature
  main

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (feature)
$ git log --oneline
92aa8b4 (HEAD -> feature) added devops file
b2d3e08 (origin/main, main) resolved merge conflict
a43c2be update sample in branch2
f5b983c update sample in branch1
6fe33ae initial commit with sample
6f26c97 add sample.txt in branch1

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (feature)
$ ls
devops  sample

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (feature)
$ cat devops
welcome to devops

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (feature)
$ |

```

3. Undo Wrong Push

- Push a wrong commit to GitHub, then undo it without losing history.

Step 1: Create a Sample File

Create a file that will represent the "wrong" change.

```
$ vi wrong.txt
```

```
$ git add wrong.txt
```

```
$ git commit -m "Added wrong file"
```

Step 2: Push the Commit to GitHub

```
$ git push origin main
```

```

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ vi wrong.txt

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ ls
sample  wrong.txt

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ git add wrong.txt
warning: in the working copy of 'wrong.txt', LF will be replaced by CRLF the next time Git touches it

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ git commit -m "added wrong file"
[main 4446923] added wrong file
1 file changed, 1 insertion(+)
create mode 100644 wrong.txt

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ git push -u origin main
Enumerating objects: 4, done.
Counting objects: 100% (4/4), done.
Delta compression using up to 12 threads
Compressing objects: 100% (2/2), done.
Writing objects: 100% (3/3), 296 bytes | 296.00 KiB/s, done.
Total 3 (delta 0), reused 0 (delta 0), pack-reused 0
To github.com:rajkumari-hub/Git_Challenge.git
   b2d3e08..4446923  main -> main
branch 'main' set up to track 'origin/main'.

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ |

```

Step 3: View the Commit History

\$ git log --oneline

Step 4: Undo the Wrong Commit

Create a new commit that reverses the changes.

\$ git revert HEAD

If your editor opens:

1. Keep the default commit message.
2. Save and close the editor

Step 5: Verify the History

\$ git log --oneline

```

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ git log --oneline
4446923 (HEAD -> main, origin/main) added wrong file
b2d3e08 resolved merge conflict
a43c2be update sample in branch2
f5b983c update sample in branch1
6fe33ae initial commit with sample
6f26c97 add sample.txt in branch1

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ git revert HEAD
[main 4dbcd3c] Revert "added wrong file"
1 file changed, 1 deletion(-)
delete mode 100644 wrong.txt

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ git log --oneline
4dbcd3c (HEAD -> main) Revert "added wrong file"
4446923 (origin/main) added wrong file
b2d3e08 resolved merge conflict
a43c2be update sample in branch2
f5b983c update sample in branch1
6fe33ae initial commit with sample
6f26c97 add sample.txt in branch1

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ |

```

```

Revert "added wrong file"

This reverts commit 44469231f4b27d129cdcaa47d0f6db49cce4084e.

# Please enter the commit message for your changes. Lines starting
# with '#' will be ignored, and an empty message aborts the commit.
#
# On branch main
# Your branch is up to date with 'origin/main'.
#
# Changes to be committed:
#   deleted:   wrong.txt
#
~
~

```

Step 6: Push the Revert Commit

\$ git push origin main

Step 7: Verify the Working Directory

\$ ls

The wrong.txt file will no longer be present because the revert removed it.

\$ git status

```

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ git push -u origin main
Enumerating objects: 3, done.
Counting objects: 100% (3/3), done.
Delta compression using up to 12 threads
Compressing objects: 100% (1/1), done.
Writing objects: 100% (2/2), 259 bytes | 259.00 KiB/s, done.
Total 2 (delta 0), reused 0 (delta 0), pack-reused 0
To github.com:rajkumari-hub/Git_Challenge.git
   4446923..4dbcd3c  main -> main
branch 'main' set up to track 'origin/main'.

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ ls
sample

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ git status
On branch main
Your branch is up to date with 'origin/main'.

nothing to commit, working tree clean

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ |

```

4. Amend a Commit

- Make a commit, then add a missing file to it using \$ git commit --amend.

Step 1: Create the First File

\$ vi git.txt

\$ git add git.txt

\$ git commit -m "added git file"

```

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ vi git.txt

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ ls
git.txt  sample

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ git add git.txt
warning: in the working copy of 'git.txt', LF will be replaced by CRLF the next time Git touches it

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ git commit -m "Add git file"
[main d3c8016] Add git file
 1 file changed, 1 insertion(+)
 create mode 100644 git.txt

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)

```

Step2: Realize You Forgot Another File

Create another file.

```
$ echo "Git Branching" > branch.txt
```

```
$ git status
```

```
$ git add .
```

```
$ git status
```

```
brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ echo "git branching"> branch.txt

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ ls
branch.txt  git.txt  sample

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ git status
On branch main
Your branch is ahead of 'origin/main' by 1 commit.
  (use "git push" to publish your local commits)

Untracked files:
  (use "git add <file>..." to include in what will be committed)
    branch.txt

nothing added to commit but untracked files present (use "git add" to track)

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ git add branch.txt
warning: in the working copy of 'branch.txt', LF will be replaced by CRLF the next time Git touches it

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ git status
On branch main
Your branch is ahead of 'origin/main' by 1 commit.
  (use "git push" to publish your local commits)

Changes to be committed:
  (use "git restore --staged <file>..." to unstage)
    new file:   branch.txt

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ |
```

Step 3: Amend the Previous Commit

Run: `$ git commit --amend`

Your default editor will open.

You'll see the previous commit message

```
Add git file

# Please enter the commit message for your changes. Lines starting
# with '#' will be ignored, and an empty message aborts the commit.
#
# Date:      Fri Jul 10 10:53:02 2026 +0530
#
# On branch main
# Your branch is ahead of 'origin/main' by 1 commit.
#   (use "git push" to publish your local commits)
#
# Changes to be committed:
#   new file:   branch.txt
#   new file:   git.txt
#
~
```

```
brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ git commit --amend

$ |
```

5. Cherry-pick a Commit

- Take a specific commit from one branch and apply it to another branch.

Step1: Create a New Branch

Create a branch named **feature**.

\$ git checkout -b feature

Create a new file using vi editor

```
$ vi chertrt.txt
```

```
$ git add .
```

```
$ git commit -m "added cherry pick"
```

```
brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ git branch
* main

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ git checkout -b feature
Switched to a new branch 'feature'

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (feature)
$ echo "Cherry Pick Example" > cherry.txt

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (feature)
$ ls
branch.txt  cherry.txt  git.txt  sample

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (feature)
$ git add cherry.txt
warning: in the working copy of 'cherry.txt', LF will be replaced by CRLF the next time Git touches it

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (feature)
$ git commit -m "Added cherry pick"
[feature ab6a7fc] Added cherry pick
1 file changed, 1 insertion(+)
create mode 100644 cherry.txt

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (feature)
$
```

Step2: View the commit hash

```
$ git log --oneline
```

Here, copy the commit id/hash of cherry pick

Ex: ab6a7fc

```
brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (feature)
$ git log --oneline
ab6a7fc (HEAD -> feature) Added cherry pick
3ab3de9 (origin/main, main) Add git file
4dbcd3c Revert "added wrong file"
4446923 added wrong file
b2d3e08 resolved merge conflict
a43c2be update sample in branch2
f5b983c update sample in branch1
6fe33ae initial commit with sample
6f26c97 add sample.txt in branch1

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (feature)
$ |
```

Step 3: Switch to Main Branch

\$ git checkout main

Step 4: Cherry-pick the Commit

Use the commit hash copied earlier.

\$ git cherry-pick ab6a7fc

- The **message** is the same
- The **commit hash** is different

Git created a **new commit** with the same changes.

Step 5: Verify the Commit History

\$ git log --oneline

Step 6: Verify the File

\$ ls

cherry.txt

Step 7: Check Both Branches

\$git branch

```

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (feature)
$ git checkout main
Switched to branch 'main'
Your branch is up to date with 'origin/main'.

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ ls
branch.txt  git.txt  sample

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ git cherry-pick ab6a7fc
[main 046d08e] Added cherry pick
Date: Fri Jul 10 11:07:13 2026 +0530
1 file changed, 1 insertion(+)
create mode 100644 cherry.txt

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ ls
branch.txt  cherry.txt  git.txt  sample

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ git branch
  feature
* main

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ |

```

```

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ git log --oneline
046d08e (HEAD -> main) Added cherry pick
3ab3de9 (origin/main) Add git file
4dbcd3c Revert "added wrong file"
4446923 added wrong file
b2d3e08 resolved merge conflict
a43c2be update sample in branch2
f5b983c update sample in branch1
6fe33ae initial commit with sample
6f26c97 add sample.txt in branch1

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ |

```

6. Interactive Rebase

- Reorder and squash multiple commits into a single clean commit.

Step 1: Create the First File

\$ vi student

\$ git add .

```
$ git commit -m "added student"
```

Step2: Create the second file

```
$ vi college
```

```
$ git add .
```

```
$ git commit -m "added college"
```

```
prajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ ls
branch.txt  cherry.txt  git.txt  sample

prajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ vi student

prajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ git add student
warning: in the working copy of 'student', LF will be replaced by CRLF the next time Git touches it

prajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ git commit -m "added student"
[main 9638ee9] added student
1 file changed, 1 insertion(+)
create mode 100644 student

prajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ vi college

prajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ git add college
warning: in the working copy of 'college', LF will be replaced by CRLF the next time Git touches it

prajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ git commit -m "added college"
[main d01a340] added college
1 file changed, 1 insertion(+)
create mode 100644 college

prajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ |
```

Step3: Verify the Commit History

```
$ git log --oneline
```

Step 4: Start Interactive Rebase

We want to modify the last **4 commits**.

```
$ git rebase -i HEAD~4
```

```

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ git log --oneline
4dc8e4b (HEAD -> main) added rules
f26992e added college
88419fc added student
2eadd1b add student college rules files
e2dd6d3 Added cherry pick
3ab3de9 (origin/main) Add git file
4dbcd3c Revert "added wrong file"
4446923 added wrong file
b2d3e08 resolved merge conflict
a43c2be update sample in branch2
f5b983c update sample in branch1
6fe33ae initial commit with sample
6f26c97 add sample.txt in branch1

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ |

```

```

pick 2eadd1b add student college rules files
squash 88419fc added student
squash f26992e added college
squash 4dc8e4b added rules

# Rebase e2dd6d3..4dc8e4b onto e2dd6d3 (4 commands)
#
# Commands:
# p, pick <commit> = use commit
# r, reword <commit> = use commit, but edit the commit message
# e, edit <commit> = use commit, but stop for amending
# s, squash <commit> = use commit, but meld into previous commit
# f, fixup [-C | -c] <commit> = like "squash" but keep only the previous
#                               commit's log message, unless -C is used, in which case
#                               keep only this commit's message; -c is same as -C but
#                               opens the editor
# x, exec <command> = run command (the rest of the line) using shell
# b, break = stop here (continue rebase later with 'git rebase --continue')
# d, drop <commit> = remove commit
# l, label <label> = label current HEAD with a name
# t, reset <label> = reset HEAD to a label
# m, merge [-C <commit> | -c <commit>] <label> [# <oneline>]

```

Step 4: Edit the Commit Message

Git opens another editor with: save and close the editor

```

# This is a combination of 4 commits.
# This is the 1st commit message:

add student college rules files in one commit

# This is the commit message #2:

# This is the commit message #3:

# This is the commit message #4:

# Please enter the commit message for your changes. Lines starting
# with '#' will be ignored, and an empty message aborts the commit.
#
# Date:      Fri Jul 10 12:13:21 2026 +0530
#
# interactive rebase in progress; onto e2dd6d3

```

```

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)

commit ef412d962b9e8c17d9609bc8783cf15ded93f378 (HEAD -> main)
Author: rajkumari <brajkumari7675@gmail.com>
Date: Fri Jul 10 12:13:21 2026 +0530

    add student college rules files in one commit

```

7. Tagging & Release

- Create a version tag (v1.0), push it to GitHub, then delete and restore it.

Step 1: Create an Annotated Tag

```
$ git tag -a v1.0 -m "Version 1.0 Release"
```

Explanation:

- git tag → Creates a tag.
- -a → Creates an annotated tag.
- v1.0 → Tag name.
- -m → Tag message.

Step2: Verify tag and tag details

```
$ git tag
```

\$ git show v1.0

```
$ git tag -a v1.0 -m "Version 1.0 Release"

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ git tag
v1.0

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ git show v1.0
tag v1.0
Tagger: rajkumari <brajkumari7675@gmail.com>
Date:   Fri Jul 10 12:39:01 2026 +0530

Version 1.0 Release

commit ef412d962b9e8c17d9609bc8783cf15ded93f378 (HEAD -> main, tag: v1.0)
Author: rajkumari <brajkumari7675@gmail.com>
Date:   Fri Jul 10 12:13:21 2026 +0530

    add student college rules files in one commit

diff --git a/college b/college
index c1f7355..b8c4780 100644
--- a/college

-Student life is very nice
+student
```

Step3: Push the Tag to GitHub

\$ git push origin v1.0

```
brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ git push origin v1.0
Enumerating objects: 12, done.
Counting objects: 100% (12/12), done.
Delta compression using up to 12 threads
Compressing objects: 100% (5/5), done.
Writing objects: 100% (11/11), 968 bytes | 484.00 KiB/s, done.
Total 11 (delta 1), reused 0 (delta 0), pack-reused 0
remote: Resolving deltas: 100% (1/1), done.
To github.com:rajkumari-hub/Git_Challenge.git
 * [new tag]         v1.0 -> v1.0

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ |
```

Step 4: Verify the Tag on GitHub

1. Open your GitHub repository.

2. Click **Releases** or **Tags**.

Step 5: Delete the Local Tag

```
$ git tag -d v1.0
```

Verify:

```
$ git tag
```

No tags will be listed.

Step 6: Delete the Remote Tag (GitHub)

```
$ git push origin --delete v1.0
```

```
brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ git tag -d v1.0
Deleted tag 'v1.0' (was 2027e52)

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ git tag

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ git push origin --delete v1.0

- [deleted]          v1.0

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ |
```

Step 7: Restore the Deleted Tag

Find the commit you want to tag again.

```
$ git log --oneline
```

Restore the tag using commit hash

```
$ git tag -a v1.0 ef412d9 -m "Version 1.0 Release"
```

```
$ git tag
```

```
brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ git log --oneline

8. Clone with Sparse Checkout

- Clone only a subdirectory of a repo using sparse checkout.

Sparse checkout in **cone mode** is designed to work with **directories**.

Before performing Sparse Checkout we need to create a direcories

```
brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ echo "Jenkins Notes" > DevOps/jenkins.txt
echo "Python Basics" > Python/basics.txt
brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$
brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ echo "Core Java Notes" > Java/corejava.txt
brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$
brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ echo "Python Basics" > Python/basics.txt
brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ ls -R
.:
DevOps/  Java/  Python/  branch.txt  cherry.txt  college  git.txt  rules  sample  student
./DevOps:
jenkins.txt
./Java:
corejava.txt
./Python:
basics.txt
brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ |
```

Step 1: Move to the Parent Directory

```
$ cd ..
```

Step 2: Clone the Repository Without Checking Out Files

```
git clone --filter=blob:none --no-checkout
```

```
https://github.com/<username>/Git_Challenge.git SparseRepo
```

Step 3: Navigate to the Cloned Repository

```
$ cd SparseRepo
```

Step 4: Initialize Sparse Checkout

```
$ git sparse-checkout init - -cone
```

```

brajk@RajKumari MINGW64 /c/ProjectRepos
$ git clone --filter=blob:none --no-checkout git@github.com:rajkumari-hub/Git_Challenge.git SparseRepo
Cloning into 'SparseRepo'...
remote: Enumerating objects: 25, done.

9. Reset vs Revert Challenge

- Demonstrate the difference between git reset –hard and git revert in a repo.

Step1: Create a Sample File

```
$ echo "Reset Example" > reset.txt
```

Step 2: Stage the File

```
$ git add reset.txt
```

Step 3: Commit the Changes

```
$ git commit -m "Added reset example"
```

Step 4: View Commit History

```
$ git log --oneline
```

```

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ ls
DevOps/  Java/  Python/  branch.txt  cherry.txt  college  git.txt  rules  sample  student

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ echo "Reset Example" > reset.txt

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ echo "Reset Example" > reset.txt

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ git commit -m "Added reset example"
On branch main
Your branch is up to date with 'origin/main'.

Untracked files:

10. Detached HEAD Challenge

- Checkout a specific commit (detached HEAD state) and create a new branch from it.

Step1: View the Commit History

\$ git log - -oneline

Copy the commit hash you want to check out.

Step 2: Checkout the Specific Commit

\$ git checkout f26992e

```

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ git log --oneline
1baf530 (HEAD -> main) Revert "Added revert example"
8cf090f Added revert example
ef412d9 (tag: v1.0) add student college rules files in one commit
e2dd6d3 Added cherry pick
3ab3de9 Add git file
4dbcd3c Revert "added wrong file"
4446923 added wrong file
b2d3e08 resolved merge conflict
a43c2be update sample in branch2
f5b983c update sample in branch1
6fe33ae initial commit with sample
6f26c97 add sample.txt in branch1

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ git checkout 3ab3de9
Note: switching to '3ab3de9'.

You are in 'detached HEAD' state. You can look around, make experimental
changes and commit them, and you can discard any commits you make in this
state without impacting any branches by switching back to a branch.

If you want to create a new branch to retain commits you create, you may
do so (now or later) by using -c with the switch command. Example:

    git switch -c <new-branch-name>

Or undo this operation with:

    git switch -

Turn off this advice by setting config variable advice.detachedHead to false

HEAD is now at 3ab3de9 Add git file

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge ((3ab3de9...))
$ |

```

Step 3: Verify the Detached HEAD State

\$ git status

```

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge ((3ab3de9...))
$ git status
HEAD detached at 3ab3de9
Untracked files:
  (use "git add <file>..." to include in what will be committed)
    reset.txt

nothing added to commit but untracked files present (use "git add" to track)

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge ((3ab3de9...))
$ |

```

Step 4: Create a New Branch from the Detached HEAD

\$ git checkout -b detached-branch

Step 5: Verify the Branch

\$ git branch

```
brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge ((3ab3de9...))
$ git checkout -b detached-branch
Switched to a new branch 'detached-branch'

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (detached-branch)
$ git branch

  feature
  main

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (detached-branch)
$ git log --oneline
3ab3de9 (HEAD -> detached-branch) Add git file
4dbcd3c Revert "added wrong file"
4446923 added wrong file
b2d3e08 resolved merge conflict
a43c2be update sample in branch2
f5b983c update sample in branch1
6fe33ae initial commit with sample
6f26c97 add sample.txt in branch1

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (detached-branch)
$ git log --oneline -1
3ab3de9 (HEAD -> detached-branch) Add git file

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (detached-branch)
$ |
```

step 6: (Optional) Push the New Branch to GitHub

\$ git push -u origin detached-branch

```
brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (detached-branch)
$ git push -u origin detached-branch
Total 0 (delta 0), reused 0 (delta 0), pack-reused 0
remote:
remote: Create a pull request for 'detached-branch' on GitHub by visiting:
remote:   https://github.com/rajkumari-hub/Git_Challenge/pull/new/detached-branch
remote:
to github.com:rajkumari-hub/Git_Challenge.git
* [new branch]      detached-branch -> detached-branch
branch 'detached-branch' set up to track 'origin/detached-branch'.

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (detached-branch)
$ |
```

11. Git Hooks Challenge

- Configure a pre-commit hook to reject commits without a message format (e.g., must start with JIRA-XXX).

Step 1: Go to the Hooks Directory

```
$ cd .git/hooks
```

```
prajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ ls -la
./ ../ .git/ branch.txt cherry.txt college git.txt reset.txt rules sample student

prajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ cd .git

prajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge/.git (GIT_DIR!)
$ ls
COMMIT_EDITMSG  ORIG_HEAD  config      hooks/  info/  objects/  refs/
HEAD           REBASE_HEAD  description  index   logs/  packed-refs

prajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge/.git (GIT_DIR!)
$ cd hooks

prajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge/.git/hooks (GIT_DIR!)
$ |
```

Step 2: Create the commit-msg Hook

vi commit-msg

Add the following Script and give permissions

\$ chmod +x commit-msg

```
brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge/.git/hooks (GIT_DIR!)
$ vi commit-msg

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge/.git/hooks (GIT_DIR!)
$ chmod +x commit-msg
```

```
#!/bin/sh

commit_msg=$(cat "$1")

if ! echo "$commit_msg" | grep -qE '^JIRA-[0-9]+'; then
    echo "ERROR: Commit message must start with JIRA-XXX"
    echo "Example: JIRA-101 Add login feature"
    exit 1
fi

exit 0
```

Step 3: Return to the Repository

cd ../..

Step 4: Create a Sample File

\$ echo "Git Hooks Example" > hooks.txt

Step 5: Stage the File

\$ git add hooks.txt

Step 6: Test an Invalid Commit Message

\$ git commit -m "Added hooks file"

```

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge/.git/hooks (GIT_DIR!)
$ cd ../../

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ echo "Git Hooks Example" > hooks.txt

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ git add hooks.txt
warning: in the working copy of 'hooks.txt', LF will be replaced by CRLF the next time Git touches it

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ git commit -m "Added hooks file"
ERROR: Commit message must start with JIRA-XXX
Example: JIRA-101 Add login feature

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ |

```

Step 7: Test a Valid Commit Message

\$ git commit -m "JIRA-101 Added hooks file"

Step 8: Verify the Commit

\$ git log --oneline

```

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ git commit -m "JIRA-101 Added hooks file"
[main 2b2db7e] JIRA-101 Added hooks file
1 file changed, 1 insertion(+)
create mode 100644 hooks.txt

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ git log --oneline
2b2db7e (HEAD -> main) JIRA-101 Added hooks file
1baf530 Revert "Added revert example"
8cf090f Added revert example
ef412d9 (tag: v1.0) add student college rules files in one commit
e2dd6d3 Added cherry pick
3ab3de9 (origin/detached-branch, detached-branch) Add git file
4dbcd3c Revert "added wrong file"
4446923 added wrong file
b2d3e08 resolved merge conflict
a43c2be update sample in branch2
f5b983c update sample in branch1
6fe33ae initial commit with sample
6f26c97 add sample.txt in branch1

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ |

```

12. Squash Merge vs Rebase Merge

- Show the difference between squash merge and rebase merge with evidence.

Step1: Change the branch main to feature

```
$ git checkout feature
```

Step2: Create two files with same name and different content

```
$ vi squash.txt
```

```
$ vi squash.txt
```

Step3: Add and commit

```
$ git add .
```

```
$ git commit -m "added line"
```

```

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ git checkout feature
Switched to branch 'feature'
A
    squash.txt

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (feature)
$ ls
branch.txt  cherry.txt  git.txt  reset.txt  sample  squash.txt

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (feature)
$ cat squash.txt
Feature Line 1

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (feature)
$ git status

13. Fork & Pull Request Workflow

- Fork a repo, make a change, and submit a pull request to the original repo.

Objective: Fork a GitHub repository, make a change in your fork, and submit a Pull Request (PR) to the original repository.

Step 1: Open the Original Repository

1. Sign in to GitHub.
2. Open the original repository.

Step 2: Fork the Repository

1. Click the Fork button.

2. Select your GitHub account.
3. GitHub creates a copy of the repository under your account.

Forked Repository: <https://github.com/rajkumari-hub/rajkumari-hub-fork>

```
brajk@RajKumari MINGW64 /c/ProjectRepos
$ pwd
/c/ProjectRepos

brajk@RajKumari MINGW64 /c/ProjectRepos
$ git clone https://github.com/rajkumari-hub/rajkumari-hub-fork
Cloning into 'rajkumari-hub-fork'...

14. Recover Lost Commit

- Commit something, reset hard, and then recover it using git reflog.

Step1: Make sure you are on the main branch

```
$ git checkout main
```

Step 2: Create a new file

```
$ echo "Recover lost commit example" > recover.txt
```

Step 3: Stage the file

```
$ git add recover.txt
```

Step 4: Commit the file

```
$ git commit -m "Added recover example"
```

Step 5: View the commit history

```
$ git log --oneline
```

```

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ echo "Recover lost commit example" > recover.txt

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ git add recover.txt
warning: in the working copy of 'recover.txt', LF will be replaced by CRLF the next time Git touches it

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ git commit -m "Added recover example"
[main 807f4f4] Added recover example
1 file changed, 1 insertion(+)
create mode 100644 recover.txt

brajk@RajKumari MINGW64 /c/ProjectRepos/Git_Challenge (main)
$ git log --oneline
807f4f4 (HEAD -> main) Added recover example
